

# OPENDCN<sup>®</sup> + SERVER

PRODUCT DESCRIPTION & DATA-SHEET

version 1.2

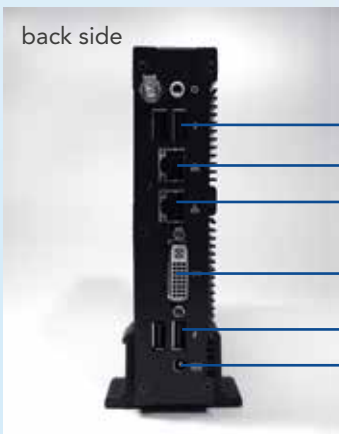

OPENDCN PLUS is an extended version of the OPENDCN service based on small networked server at cinema site combined with its web application. It receives playlists and required content items automatically. The server sends the play out audits back to your customers. The application visualizes your pre-show in a web-browser on a monitor screen and gives information about status of content transfer. Ideal for smaller cinemas which prefer a more automatic mode of operation as OPENDCN provides.

- Green lamp (connection to power)
- Red lamp (access to hard drive)
- Power Button

The OPENDCN server is a small and easy to manage product, that will significantly facilitate your workflow in the cinema. It is to be installed by the exhibitor himself. Support is given by delivered installation instructions and available hotline via phone.

Pushing the power button at the frontside once quickly starts or stops the server if running. If the server is connected to power, the green LED is glowing. Accessing of hard driver is indicated by a flashing red LED.

- 2x USB-Port 2.0
- LAN-Port (Intranet)
- LAN-Port (Internet)
- DVI-Port
- 2x USB-Port 2.0 power supply

The backside has two network interfaces. One for the inner network at cinema and the other is to be connected to the internet.

### Features:

- Playlist receiving
- Content receiving
- LogFile receiving
- Audit sending
